

Occupancy Tracking for Supermarkets

Ensure safe shopping spaces with
real-time occupancy data

Measure. Control. Communicate.

RetailNext's live occupancy and monitoring solution for supermarkets and c-stores is designed to help businesses comply with social distancing guidelines and occupancy restrictions through automatic reporting and configured occupancy thresholds. Leverage detailed insights to deliver safer shopping experiences

Get an at-a-glance view of occupancy levels through the dashboard, based on configured occupancy limits at each store.

Monitor live occupancy metrics

Gain insights into store density metrics, such as occupancy thresholds and limits, across all stores, in real-time. Use data to forecast traffic trends and staffing levels. Access information on the go using the RetailNext user interface or mobile application.

Ensure compliance and communicate findings

Use reports to identify high-traffic areas and notify teams when store limits are reached. Communicate data with shoppers by providing visibility into occupancy metrics prior to visits.

Integrate data with other technologies

Easily connect the RetailNext API to end user applications from various technology partners, such as virtual queuing apps, customer-facing digital signage or labor and task management tools.
